# Acknowledgements

The past four and a half years were thrilling and challenging at the same time. I consider myself fortunate to have been able to work in a fantastic group at Nikhef for the ATLAS experiment at CERN in such exciting times, with the first data coming in right in the middle of my PhD.

I would like to thank my promoter Prof. Dr. Stan Bentvelsen as well as my supervisor Dr. Peter Kluit for all their support and guidance, particularly in the final year of my PhD. I would also like to thank Dr. Max Baak who supervised me during my first half year at Nikhef, getting me involved in an interesting Higgs analysis right from the start. I thank my family and all my friends for their support particularly during the difficult periods in my PhD. Hereby I include all my fantastic colleagues from Nikhef and CERN that I long consider my friends. We had four and a half amazing years in Amsterdam as well as in the region of Geneva with lots of fun also beyond the office hours. A special thanks goes to my paranimfs Ido Mussche and Marten Bosma, as well as my “paranimf of honor” Lucie de Nooij.
