

## The MINERvA Neutrino Scattering Experiment

Richard Gran, University of Minnesota Duluth

for the MINERvA Collaboration.

This has been a very active time for the MINERvA experiment. It has received construction approval and funding and is on track for installation in the NuMI beam in 2009. Much R&D work has been completed. This poster presents an update on the results from the recent R&D and prototyping work, the full experiment construction, and preparations for hadron and electron test beam calibrations of the detector components. The poster also describes the main physics goals and expected event rates for the experiment.
