<i>Preface</i>	lv
1 Introductory Concepts	1
1.1 Transfer Maps	1
1.1.1 Maps and Dynamics	1
1.1.2 Maps and Accelerator Physics	4
1.1.3 Maps and Geometry	5
1.2 Map Iteration and Other Background Material	6
1.2.1 Logistic Map	6
1.2.2 Complex Logistic Map	14
1.2.3 Simplest Nonlinear Symplectic Map	19
1.2.4 Goal for Use of Maps in Accelerator Physics	23
1.2.5 Maps from Hamiltonian Differential Equations	24
1.3 Essential Theorems for Differential Equations	36
1.4 Transfer Maps Produced by Differential Equations	42
1.4.1 Map for Simple Harmonic Oscillator	43
1.4.2 Maps for Monomial Hamiltonians	44
1.4.3 Stroboscopic Maps and Duffing Equation Example	45
1.5 Lagrangian and Hamiltonian Equations	87
1.5.1 The Nonsingular Case	87
1.5.2 A Common Singular Case	89
1.6 Hamilton's Equations with a Coordinate as an Independent Variable	97
1.7 Definition of Poisson Bracket	120
2 Numerical Integration	141
2.1 The General Problem	142
2.2 A Crude Solution Due to Euler	142
2.2.1 Procedure	142
2.2.2 Numerical Example	143
2.3 Runge-Kutta Methods	149
2.3.1 Introduction	149
2.3.2 Procedure	150
2.3.3 Numerical Example	151
2.3.4 Nomenclature	156
2.4 Finite-Difference Methods	160

2.4.1	Finite-Difference Procedure	160
2.4.2	Numerical Example	162
2.4.3	Derivation and Error Analysis	168
2.5	(Automatic) Choice and Change of Step Size and Order	176
2.5.1	Change of Step Size in Runge-Kutta	177
2.5.2	Adaptive Finite Difference Methods	177
2.5.3	Jet Formulation	178
2.5.4	Virtues of Jet Formulation	184
2.5.5	Advice to the Novice	187
2.6	Extrapolation Methods	189
2.6.1	Overview	189
2.6.2	Making a Meso Step	190
2.6.3	Summary	193
2.6.4	Again, Advice to the Novice	194
2.7	Things Not Covered	197
2.7.1	Størmer-Cowell and Nyström Methods	197
2.7.2	Other Starting Procedures	197
2.7.3	Stability	197
2.7.4	Regularization, Etc.	198
2.7.5	Solutions with Few Derivatives	198
2.7.6	Symplectic Integrators	199
2.7.7	Error Analysis	199
2.7.8	Backward Error Analysis	200
2.7.9	Comparison of Methods	201
3	Symplectic Matrices	209
3.1	Definitions	209
3.2	Variants	211
3.3	Simple Symplectic Restrictions and Symplectic Factorization	214
3.3.1	Large-Block Formulation	214
3.3.2	Symplectic Block Factorization	215
3.3.3	Symplectic Matrices Have Determinant +1	217
3.3.4	Small-Block Formulation	218
3.4	Eigenvalue Spectrum	219
3.4.1	Background	219
3.4.2	The 2×2 Case	221
3.4.3	The 4×4 and $2n \times 2n$ Cases	222
3.4.4	Further Symplectic Restrictions	226
3.4.5	In Praise of and Gratitude for the Symplectic Condition	228
3.5	Eigenvector Structure, Normal Forms, and Stability	232
3.5.1	Eigenvector Basis	232
3.5.2	J -Based Angular Inner Product	232
3.5.3	Use of Angular Inner Product	232

3.5.4	Definition and Use of Signature	234
3.5.5	Definition of Phase Advances and Tunes	236
3.5.6	The Krein-Moser Theorem and Krein Collisions	236
3.5.7	Normal Forms	238
3.5.8	Stability	240
3.6	Group Properties, Dyadic and Gram Matrices, and Bases	245
3.6.1	Group Properties	246
3.6.2	Dyadic and Gram Matrices, Bases and Reciprocal Bases	248
3.6.3	Orthonormal and Symplectic Bases	251
3.6.4	Construction of Orthonormal Bases	253
3.6.5	Construction of Symplectic Bases	258
3.7	Lie Algebraic Properties	265
3.7.1	Matrix Exponential and Logarithm	265
3.7.2	Application to Symplectic Matrices	268
3.7.3	Matrix Lie Algebra and Lie Group	270
3.7.4	Abstract Definition of a Lie Algebra	272
3.7.5	Abstract Definition of a Lie Group	273
3.7.6	Classification of Lie Algebras	274
3.7.7	Adjoint Representation of a Lie Algebra	278
3.8	Exponential Representations	299
3.8.1	Exponential Representation of Orthogonal and Unitary Matrices	299
3.8.2	Exponential Representation of Symplectic Matrices	300
3.9	Unitary Subgroup Structure	311
3.10	Other Subgroup Structure	322
3.11	Other Factorizations/Decompositions	325
3.12	Cayley Representation of Symplectic Matrices	325
3.13	General Symplectic Forms, Darboux Transformations, Pfaffians, and Vari- ant Symplectic Groups	330
3.13.1	General Symplectic Forms	330
3.13.2	Darboux Transformations	333
3.13.3	Symplectic Forms and Pfaffians	337
3.13.4	Variant Symplectic Groups	338
4	Matrix Exponentiation and Symplectification	349
4.1	Exponentiation by Scaling and Squaring	350
4.1.1	The Ordinary Exponential Function	350
4.1.2	The Matrix Exponential Function	355
4.2	(Orthogonal) Polar Decomposition	358
4.3	Symplectic Polar Decomposition	363
4.3.1	Introduction	363
4.3.2	Properties of J -Symmetric Matrices	364
4.3.3	Initial Result on Symplectic Polar Decomposition	367
4.3.4	Extended Result on Symplectic Polar Decomposition	368
4.3.5	Symplectic Polar Decomposition Not Globally Possible	371

4.3.6	Uniqueness of Symplectic Polar Decomposition	374
4.3.7	Concluding Summary	375
4.4	Finding the Closest Symplectic Matrix	389
4.4.1	Background	389
4.4.2	Use of Euclidean Norm	391
4.4.3	Geometric Interpretation of Symplectic Polar Decomposition . .	393
4.5	Symplectification Using Symplectic Polar Decomposition	400
4.5.1	Properties of Symplectification Using Symplectic Polar Decompo- sition	400
4.5.2	Iteration	402
4.6	Modified Darboux Symplectification	408
4.7	Exponential and Cayley Symplectifications	411
4.7.1	Exponential Symplectification	411
4.7.2	Cayley Symplectification	412
4.7.3	Cayley Symplectification Near the Identity	413
4.8	Transformation (Generating) Function Symplectification	414
5	Lie Algebraic Structure of Classical Mechanics and Other Delights	421
5.1	Properties of the Poisson Bracket	421
5.2	Equations, Constants, and Integrals of Motion	423
5.3	Lie Operators	425
5.4	Lie Transformations	430
5.4.1	Definition and Some Properties	430
5.4.2	Applications	433
5.5	Realization of the $sp(2n)$ Lie Algebra	435
5.6	Basis for $sp(2)$	438
5.7	Basis for $sp(4)$	441
5.8	Basis for $sp(6)$	447
5.8.1	$U(3)$ Preliminaries	447
5.8.2	Polynomials for $u(3)$	449
5.8.3	Plan for the Remaining Polynomials	449
5.8.4	Cartan Basis for $su(3)$	450
5.8.5	Representations of $su(3)$	452
5.8.6	Weight Diagrams for First Few $su(3)$ Representations	454
5.8.7	Weight Diagram for the General $su(3)$ Representation	457
5.8.8	Remaining Polynomials	458
5.9	Some Topological Questions	471
5.9.1	Nature and Connectivity of $Sp(2n, R)$	472
5.9.2	Where Are the Stable Elements?	474
5.9.3	Covering/Circumnavigating $U(n)$	476
5.10	Notational Pitfalls and Quaternions	478
5.10.1	The Lie Algebras $sp(2n, R)$ and $usp(2n)$	478
5.10.2	$USp(2n)$ and Quaternions	479
5.10.3	Quaternion Matrices	480
5.10.4	Properties of Quaternion Matrices	481

5.10.5	Quaternion Matrices and $USp(2n)$	482
5.10.6	Quaternion Inner Product and Its Preservation	483
5.10.7	Discussion	484
5.11	Moebius Transformations	489
5.11.1	Definition in the Context of Complex Variables	489
5.11.2	Matrix Extension	490
5.11.3	Invertibility Conditions	491
5.11.4	Transitivity	494
5.12	Symplectic Transformations and Siegel Space	495
5.12.1	Action of $Sp(2n, C)$ on Space of Complex Symmetric Matrices	495
5.12.2	Siegel Space and $Sp(2n, R)$	496
5.12.3	Group Action on Homogeneous Space	496
5.12.4	Homogeneous Spaces and Cosets	498
5.12.5	Group Action on Cosets Equals Group Action on Homogeneous Space	499
5.12.6	Application of Results to Action of $Sp(2n, R)$ on Siegel Space	500
5.12.7	Action of $Sp(2n, R)$ on the Generalized Real Axis	501
5.12.8	Symplectic Modular Groups	503
5.13	Moebius Transformations Relating Symplectic and Symmetric Matrices	507
5.13.1	Overview	507
5.13.2	The Cayley Moebius Transformation	508
5.13.3	Two Symplectic Forms and Their Relation by a Darboux Transformation	509
5.13.4	The Infinite Family of Darboux Transformations	510
5.13.5	Isotropic Vectors and Lagrangian Planes	511
5.13.6	Connection between Symplectic Matrices and Lagrangian Planes	513
5.13.7	Connection between Symmetric Matrices and Lagrangian Planes	514
5.13.8	Relation between Symplectic and Symmetric Matrices and the Role of Moebius Transformations	516
5.13.9	Completion of Tasks	518
5.14	Matrix Symplectification Revisited	525
5.15	Uniqueness of Cayley Moebius Transformation	529
6	Symplectic Maps	539
6.1	Preliminaries and Definitions	539
6.1.1	Gradient Maps	540
6.1.2	Symplectic Maps	541
6.2	Group Properties	545
6.3	Preservation of General Poisson Brackets	558
6.4	Relation to Hamiltonian Flows	561
6.4.1	Hamiltonian Flows Generate Symplectic Maps	561
6.4.2	Any Family of Symplectic Maps Is Hamiltonian Generated	564
6.4.3	Almost All Symplectic Maps Are Hamiltonian Generated	568

6.4.4	Transformation of a Hamiltonian Under the Action of a Symplectic Map	568
6.5	Mixed-Variable Transformation (Generating) Functions	570
6.5.1	Transformation Functions Produce Symplectic Maps	570
6.5.2	Finding the Generating Hamiltonian	573
6.5.3	Finding a Transformation Function for a Map	575
6.6	Transformation Functions Come from an Exact Differential	582
6.6.1	Overview	582
6.6.2	A Democratic Differential Form	583
6.6.3	Information about $\mathcal{M}$ Carried by the Democratic Form	584
6.6.4	Breaking the Degeneracy	585
6.7	Plethora of Transformation Functions	588
6.7.1	Derivation	588
6.7.2	Discussion	595
6.7.3	Hamilton-Jacobi Theory and Equations	599
6.8	Symplectic Invariants	612
6.8.1	Liouville's Theorem	612
6.8.2	Gromov's Nonsqueezing Theorem and the Symplectic Camel	613
6.8.3	Poincaré Integral Invariants	618
6.8.4	Connection between Surface and Line Integrals	620
6.8.5	Poincaré-Cartan Integral Invariant	624
6.9	Poincaré Surface of Section and Poincaré Return Maps	630
6.10	Overview and Preview	634
7	Lie Transformations and Symplectic Maps	641
7.1	Production of Symplectic Maps	641
7.2	Realization of the Group $Sp(2n)$ and Its Subgroups	645
7.3	Invariant Scalar Product	653
7.4	Symplectic Map for Flow of Time-Independent Hamiltonian	664
7.5	Taylor Maps and Jets	667
7.6	Factorization Theorem	669
7.7	Inclusion of Translations	677
7.8	Other Factorizations	683
7.9	Coordinates and Connectivity	683
7.10	Storage Requirements	685
8	A Calculus for Lie Transformations	693
8.1	Adjoint Lie Operators and the Adjoint Lie Algebra	693
8.2	Formulas Involving Adjoint Lie Operators	695
8.3	Questions of Order and other Miscellaneous Mysteries	713
8.4	Lie Concatenation Formulas	725
8.5	Map Inversion and Reverse Factorization	732

8.6	Taylor and Hybrid Taylor-Lie Concatenation and Inversion	734
8.7	Working with Exponents	742
8.7.1	Formulas for Combining Exponents	742
8.7.2	Nature of Single Exponent Form	745
8.8	Zassenhaus or Factorization Formulas	748
8.9	Ideals, Quotients, and Gradings	750
9	Inclusion of Translations in the Calculus	775
9.1	Introduction	775
9.2	The Inhomogeneous Symplectic Group $ISp(2n, R)$	776
9.3	Lie Concatenation in the General Nonlinear Case	783
9.4	Canonical Treatment of Translations	792
9.4.1	Preliminaries	792
9.4.2	Case of Maps with No Nonlinear Part	797
9.4.3	Case of General Maps	801
9.5	Map Inversion and Reverse and Mixed Factorizations	812
9.6	Taylor and Hybrid Taylor-Lie Concatenation and Inversion	815
9.7	The Lie Algebra of the Group of all Symplectic Maps Is Simple	820
10	Computation of Transfer Maps	823
10.1	Equation of Motion	823
10.2	Series (Dyson) Solution	825
10.3	Exponential (Magnus) Solution	826
10.4	Factored Product Solution	830
10.4.1	Background	830
10.4.2	Term by Term Procedure	831
10.4.3	Accelerated Procedure	837
10.5	Lie Concatenation Revisited	838
10.6	Direct Taylor Summation	842
10.7	Scaling, Splitting, and Squaring	847
10.8	Canonical Treatment of Errors	857
10.9	Symplectic Integration and Zassenhaus Formulas	862
10.9.1	$T + V$ Splitting	863
10.9.2	Symplectic Runge Kutta Methods for General Hamiltonians	868
10.9.3	Symplectic Integration of General Hamiltonians Using Transformation Functions	877
10.9.4	Special Symplectic Integrator for Motion in General Electromag- netic Fields	877
10.10	Zassenhaus Formulas and Map Computation	883
10.10.1	Case of $T + V$ or General Electromagnetic Field Hamiltonians	884
10.10.2	Case of Hamiltonians Expanded in Homogeneous Polynomials	884
10.11	Other Zassenhaus Formulas	889
10.12	Taylor Methods and the Complete Variational Equations	892
10.12.1	Case of No or Ignored Parameter Dependence	894
10.12.2	Inclusion of Parameter Dependence	895

10.12.3	Solution of Complete Variational Equations Using Forward Integration	897
10.12.4	Application of Forward Integration to the Two-Variable Case . .	898
10.12.5	Solution of Complete Variational Equations Using Backward Integration	901
10.12.6	The Two-Variable Case Revisited	904
10.12.7	Application to Duffing's Equation	904
10.12.8	Expanding in Parameters as Well	907
10.12.9	Taylor Methods for the Hamiltonian Case	913
11	Transfer Maps for Idealized Straight Beam-Line Elements	925
11.1	Background	925
11.2	Drift	925
11.3	Quadrupole	925
11.4	Axial Rotation	925
11.5	Combined Function Quadrupole	925
11.6	Rare Earth Cobalt Quadrupole	925
11.7	Sextupole	925
11.8	Octupole	925
11.9	Higher-Order Multipoles	925
11.10	Thin Lens Multipoles	925
11.11	Solenoid	925
11.12	Radio Frequency Cavity	927
12	Transfer Maps for Idealized Curved Beam-Line Elements	931
12.1	Background	931
12.2	Sector Bend	931
12.3	Parallel (Rectangular) Faced Bend	931
12.4	Hard-Edge Fringe Fields	931
12.5	Pole Face Rotations	931
12.6	General Bend	931
12.7	Combined Function Bend	931
13	Cylindrical Harmonic and Taylor Expansions	933
13.1	Introduction	933
13.2	Cylindrical Harmonic Expansion	934
13.2.1	Complex Cylindrical Harmonic Expansion	935
13.2.2	Real Cylindrical Harmonic Expansion	937
13.2.3	Some Simple Examples: $m = 0, 1, 2$	941
13.2.4	Magnetic Field Expansions for the General Case	943
13.2.5	Symmetry and Allowed and Forbidden Multipoles	945
13.3	Determination of the Vector Potential:	
	Azimuthal-Free Gauge	948
13.3.1	Derivation	949
13.3.2	Some Simple Examples: $m = 1, 2$	951

13.4	Determination of the Vector Potential: Coulomb Gauge	955
13.4.1	The $m = 0$ Case	955
13.4.2	The $m \geq 1$ Cases	959
13.5	Uniqueness of Coulomb Gauge	966
13.6	Need for Generalized Gradients and the Use of Surface Data	976
13.7	Magnetic Monopole Doublet Example	978
13.7.1	Magnetic Scalar Potential and Magnetic Field	978
13.7.2	Analytic On-Axis Gradients for Monopole Doublet	981
14	Realistic Transfer Maps for Straight Beam-Line Elements	993
14.1	Introduction	993
14.2	Use of Potential Data on Surface of Circular Cylinder	995
14.3	Use of Field Data on Surface of Circular Cylinder	998
14.4	Use of Field Data on Surface of Elliptical Cylinder	1001
14.4.1	Background	1001
14.4.2	Elliptic Coordinates	1001
14.4.3	Mathieu Equations	1004
14.4.4	Periodic Mathieu Functions and Separation Constants	1005
14.4.5	Modified Mathieu Functions	1021
14.4.6	Analyticity in x and y	1025
14.4.7	Elliptic Cylinder Harmonic Expansion and On-Axis Gradients	1025
14.5	Use of Field Data on Surface of Rectangular Cylinder	1029
14.5.1	Finding the Magnetic Scalar Potential $\psi(x, y, z)$	1029
14.5.2	Finding the On-Axis Gradients	1036
14.5.3	Fourier-Bessel Connection Coefficients	1038
14.6	Attempted Use of Nearly On-Axis and Midplane Field Data	1046
14.6.1	Use of Nearly On-Axis Data	1047
14.6.2	Use of Midplane Field Data	1048
15	Tools for Numerical Implementation	1055
15.1	Third-Order Splines	1055
15.1.1	Fitting Over an Interval	1055
15.1.2	Periodic Splines	1058
15.1.3	Error Estimate for Spline Approximation	1060
15.2	Interpolation	1062
15.2.1	Bicubic Interpolation	1063
15.2.2	Bicubic Spline Interpolation	1067
15.3	Fourier Transforms	1068
15.3.1	Exact Fourier Transform and Its Large $ k $ Behavior	1068
15.3.2	Inverse Fourier Transform	1069
15.3.3	Discrete Fourier Transform	1073
15.3.4	Discrete Inverse Fourier Transform	1077
15.3.5	Spline-Based Fourier Transforms	1077
15.3.6	Fast Spline-Based Fourier Transforms	1087

15.4	Bessel Functions	1088
15.5	Mathieu Functions	1088
15.5.1	Calculation of Separation Constants $a_n(q)$ and $b_n(q)$	1088
15.5.2	Calculation of Mathieu Functions	1088
15.5.3	Calculation of Fourier and Mathieu-Bessel Connection Coefficients	1091
16	Numerical Benchmarks	1095
16.1	Circular Cylinder Numerical Results for Monopole Doublet	1095
16.1.1	Testing the Spline-Based Inverse ($k \rightarrow z$) Fourier Transform	1095
16.1.2	Testing the Forward ($z \rightarrow k$) and ($\phi \rightarrow m$) Fourier Transforms	1102
16.1.3	Test of Interpolation off a Grid	1106
16.1.4	Reproduction of Interior Field Values	1108
16.2	Elliptical Cylinder Numerical Results for Monopole Doublet	1121
16.2.1	Finding the Mathieu Coefficients	1121
16.2.2	Behavior of Kernels	1130
16.2.3	Truncation of Series	1131
16.2.4	Approximation of Angular Integrals by Riemann Sums	1137
16.2.5	Further Tests	1146
16.2.6	Completion of Test	1146
16.3	Rectangular Cylinder Numerical Results for Monopole Doublet	1158
17	Smoothing and Insensitivity to Errors	1161
17.1	Introduction	1161
17.1.1	Preliminary Considerations	1161
17.1.2	Analyticity	1161
17.1.3	Equivalent Spatial Kernel	1162
17.1.4	What Work Lies Ahead	1168
17.2	Circular Cylinders	1168
17.3	Elliptic Cylinders	1185
17.4	Rectangular Cylinders	1209
18	Applications of Cylindrical Surface Methods	1213
18.1	Application to Final Focus Quadrupoles	1213
18.2	Application to Solenoids	1222
18.3	Application to Wigglers	1225
18.4	Application to Radio-Frequency Cavities	1225
19	Realistic Transfer Maps for Curved Beam-Line Elements	1229
19.1	Introduction	1229
19.2	Mathematical Tools	1231
19.2.1	Electric Dirac Strings	1231
19.2.2	Magnetic Dirac Strings	1234
19.2.3	Full (Two) String Monopole Vector Potential	1241
19.2.4	Monopole Doublet Vector Potentials	1242
19.2.5	Helmholtz Decomposition	1252

19.3	Construction of Kernels $\mathbf{G}^n$ and $\mathbf{G}^t$	1259
19.3.1	Background	1259
19.3.2	Construction of $\mathbf{G}^n$ Using Half-Infinite String Monopoles	1260
19.3.3	Construction of $\mathbf{G}^n$ Using Fully Infinite String Monopoles	1261
19.3.4	Discussion	1262
19.3.5	Construction of $\mathbf{G}^t$	1263
19.3.6	Final Discussion	1265
19.4	Expansion of Kernels	1268
19.4.1	Our Goal	1268
19.4.2	Binomial Theorem	1268
19.4.3	Expansion of $\mathbf{G}^t(\mathbf{r}, \mathbf{r}')$	1268
19.4.4	Expansion of $\mathbf{G}^n(\mathbf{r}, \mathbf{r}')$	1268
19.5	Numerical Benchmark	1268
19.5.1	Exact Field, Design Orbit Selection, and Choice of Surrounding Bent Box	1268
19.5.2	Results for Bent Box with Straight End Legs: Comparison of Fields	1279
19.5.3	Bent Box Results: Comparison of Maps	1285
19.6	Smoothing and Insensitivity to Errors	1286
19.7	Application to a Storage-Ring Dipole	1286
20	Error Effects and the Euclidean Group	1289
21	Representations of $sp(2n)$ and Related Matters	1291
21.1	Structure of $sp(2, R)$	1292
21.2	Representations of $sp(2, R)$	1294
21.3	Symplectic Classification of Analytic Vector Fields in Two Variables	1298
21.4	Structure of $sp(4, R)$	1307
21.5	Representations of $sp(4, R)$	1310
